

Empowering Dyslexic Thinking at School

Why it matters

- 1 in 10 people are dyslexic – someone in your class may be.
- Dyslexia affects reading, writing, & processing, not intelligence or creativity.
- Inclusive classrooms unlock innovation, creativity, and engagement.

How you can help

- Foster a culture of openness and inclusion.
- Offer the tools and adjustments in ways of working that allow dyslexic thinkers to thrive.
- Focus on strengths and recognise dyslexia as a valuable thinking skill... creative problem solving, end-goal oriented, big-picture thinking, team work and empathy.

Inclusion starts with understanding

Creating a dyslexia-friendly classroom doesn't have to be expensive or difficult...simple changes or adjustments can make a big difference!
